

Shaw Cable System Rebuild Design Kamloops, British Columbia

CableNet Designers Inc. was selected by Shaw Cablesystems for an exclusive contract to ensure the reliability of the cable company's high-speed Internet "@ HOME" service.

The objective of the project was to upgrade the existing HFC plant to 750 MHz, capable of providing bundled video and data services to current and new subscribers.

With the project successfully complete, our team of experienced engineers, technologists, designers, and drafters have helped Shaw realize the rebuild of approximately 500 kilometers of plant in Kamloops, British Columbia.

Through proven operational procedures and rigorous quality control practices, we were able to consistently deliver cost-

effective network designs that exceeded project specifications.

Scope of work on the project involved working in Lode Data™ and Microstation™ environments to deliver:

- RF design for two-way reliability.
- Strand mapping.
- Design drafting.
- Legacy data conversion.
- Construction work orders.
- Bill of materials.
